<https://MtotMtot.github.io>

BA (Hons) Games Design and Production student at Abertay University with experience working with game engines and projects involving gameplay programming and FullStack coding. Skilled in network engineering and development using C# and Gameplay analysis. Possess firsthand experience applying theoretical and practical knowledge to projects developing Peer-to-Peer and Host architecture multiplayer games, gameplay systems and balancing gameplay using analytics. Seeking to use my expertise to produce practical solutions for interesting projects.

KEY SKILLS

- Engine experience (Unity and Unreal)
- .NET developer
- Source Control (GitHub)
- Data Analytics
- Mechanics Design
- Agile Development
- Cross-discipline Experience
- Team Player
- Art and Animation Implementation
- Strong Communication
- Jira Experience

PROJECTS

- Stolen Timelines (Programmer, Technical Designer)
- Post-Poned (Designer, Programmer)
- Bar Fight (Programmer)
- Networking with FishNet

PROJECTS

Stolen Timelines – Hyper Luminal Games Programmer, Technical Designer

01/2024 – 05/2024

- I created a dynamic camera that would adapt to the player's movement and the terrain to offer a clear view of the environment without hindering the gameplay experience.
- The other mechanic I developed was the rewind ability, allowing the player to avoid fatal traps. A visual effect was added to the player when the ability was used to clearly indicate the ability was active.
- The ability would also influence the in-game time, rewinding it as the player used it allowing them to gain more time within the level.

Post-Poned Designer, Programmer

01/2023 – 05/2023

- I worked on the level design, camera and the conveyor mechanic puzzle.
- The camera mimicked a CCTV camera, being able to rotate left and right from a fixed point. The camera speed and position were fine tuned to provide a clear view of the environment to not hinder the gameplay experience.
- The conveyor belt puzzle was compromised of a list of gameObjects that would spawn in sequence that had to be scanned by the player. Each object needed the player to press the right buttons to progress.

EDUCATION

Abertay University

Bachelor of Arts with Honours (BA Hons) in Games Design and Production

Dundee, UK

09/2021 – Current

Trinity Sixth Form College

A-levels: Computer Science (A), Maths (B) and Further Maths (C)

Manchester, UK

09/2019 – 08/2021
